

# FOUNDATION

---

BY: KYLE YANG

# WHAT IS FOUNDATION?

---

- Foundation is a responsive front-end framework.
- Provides a responsive grid and HTML and CSS UI components, templates, etc.

# PROS

---

- Foundation lets you customize your website without making it look similar to others
- You don't have to customize CSS heavily
- Flexible Grids
- Many different widgets such as providing you with a HTML5 form validation library
- Additional Services

# CONS

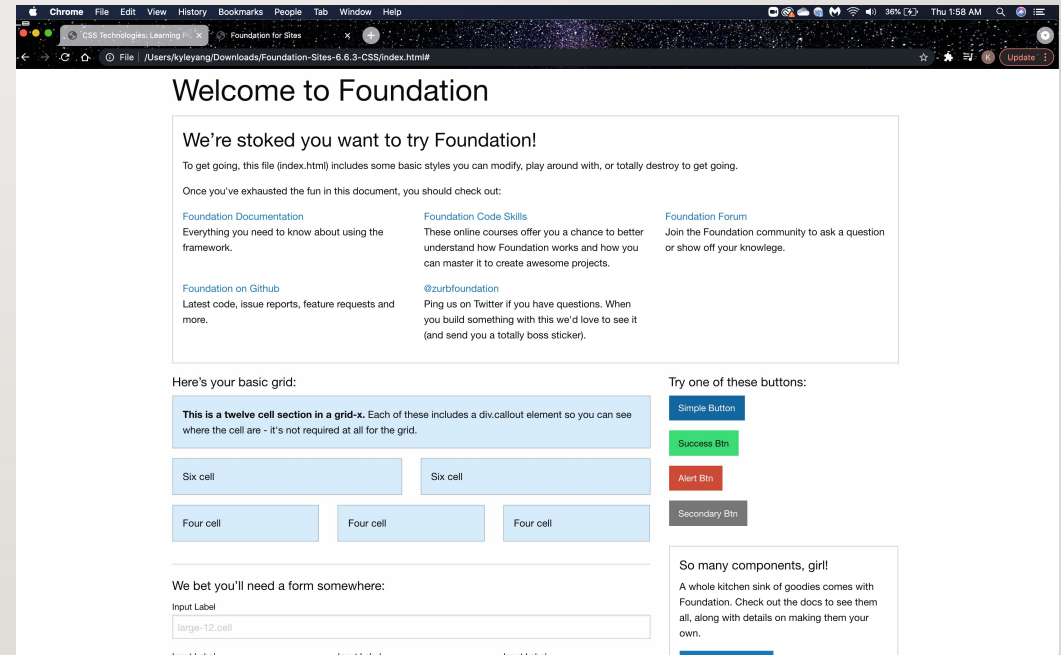

---

- Bootstrap is more well known so others may support it more than foundation
- Lack of wider support like QA sites and fixing issue forms
- Not much support for QA sites and trouble shooting

# EMPLOYING THE FRAMEWORK

---

# CUSTOMIZATION

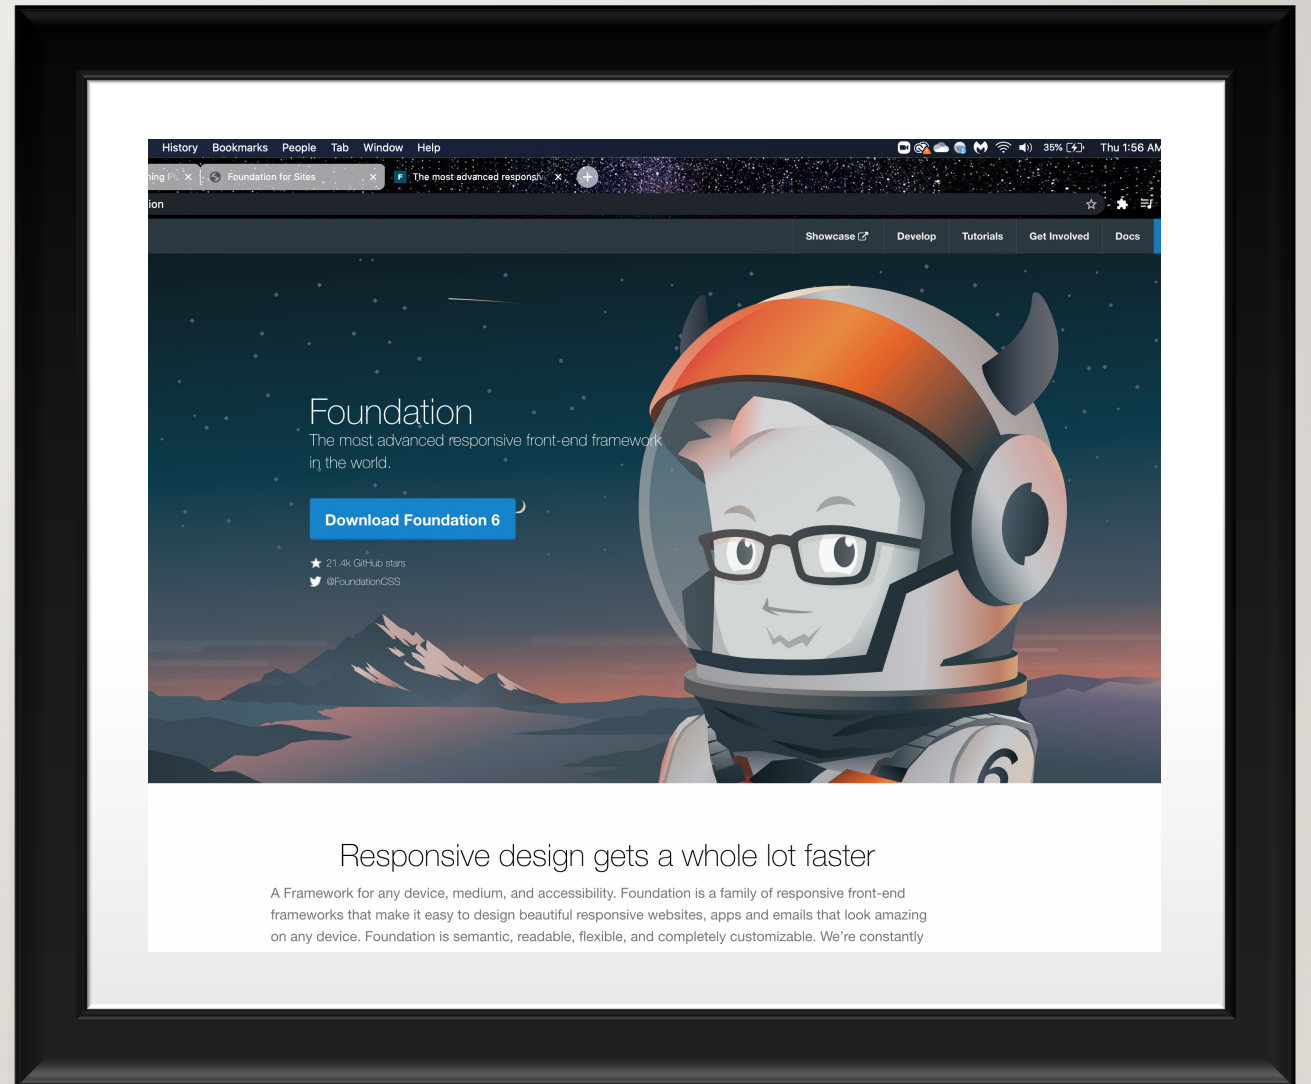

---

- <https://get.foundation/learn/tutorials.html>
- This link will get you to the website with all the tutorials of practice and examples

# INSTALLATION

---

- <https://youtu.be/6KwsGcEHVTE>
- Or you could go to the site directly and download it there
